(54) ENDOSCOPE SYSTEM**(57) Abstract:**

PROBLEM TO BE SOLVED: To provide an endoscope system capable of preventing a treatment tool from being broken, easy in operation under an endoscope and capable of being preserved in small space.

SOLUTION: This endoscope system 1 is constituted of the endoscope 2 and a clipping module 3 being freely attachable/detachable to/from the endoscope 2. A tip part 21 is provided with a tip projecting part 22 commonly used as the attaching/detaching means of the module 3, a fixing attachment/detachment 23 provided with a restraining part 23a and a wire channel 24 where a transmission wire 4 for transmission operating force is put-through. A first connecting member 41 where a female screw 42 is formed is fixed on the inner peripheral surface to be the attaching/detaching means and an operation force transmitting means in the tip part of the transmission wire 4. The module 3 is constituted of a mainbody part 30 having a connecting part 31 and a cap part 32 and a clipping tool 33. The second connecting member 37 in which a male screw 38 to be engaged with the female screw 42 of the first connecting member 41 being the attaching/detaching means and the operation force transmitting means is

formed is provided fixedly in the base end part of the operation wire 35.
